

WPC-3 BLOCK DIAGRAM

BASIC FUNCTION

The WPC-3 industrial controller operates on either 120Vac or 240Vac. It may also come equipped with a circuit breaker panel for added protection of incoming power. It may contain one, two, or three timers that control pool equipment such as pool/spa pumps, and has three remote capable circuits for the control of lighting fixtures such as Sam and Sal underwater lighting fixtures and an optional additional pump such as a pool cleaner pump. The remote is also able to synchronize the lights, circuits two and three.
